FOREWORD

This directory makes known to the public the Québec manufacturers of offshore, oil and gas industry equipment.

The companies listed herein were chosen because they offer, or have already offered, a product or service related to this sector. All manufacturers with no experience in this field were excluded.

All manufacturers mentioned were interviewed either over the phone or by mail. A certain number received the visit of our experts.

A French/English index of products and services, at the end of the directory, facilitates consultation.

As this listing is not considered to be exhaustive, we enclose therein a special form which can be filled out by those concerned in order to help us improve future editions.

Thanks are due to the industrialists whose cooperation facilitated the task of the authors: Guy Gervais, of the Service de la machinerie, de l'usinage et de l'estampage, and Jean Hémond, of the Service des équipements de transport.

MANDATE

The mandate of the Direction des biens d'équipement (DBE) is as follows:

- to keep abreast of developments in each sector of Québec industry*, to identify development possibilities and orientations for the various sectors and to promote investment opportunities; to propose government policies, programs and measures designed to encourage the expansion or consolidation of various sectors, and to administer the programs assigned to it.

In order to be able to fulfill its role effectively, the DBE develops in-depth, concrete knowledge of each industrial sector by carrying out or commissioning the necessary studies and by maintaining close contacts with business firms, industry associations and other parties involved in the various industry sectors.

The DBE fulfills its mandate by:

1. conducting sector studies in order to diagnose the problems encountered by the various sectors and evaluate their future prospects and potentiel for expansion in Québec;
2. carrying out sector analyses in order to define industrial development objectives and sector orientations and propose to the department and to the government policies and strategies to promote the growth of industrial sectors or to rationalize their operations on a more competitive basis;
3. developing and implementing assistance programs and measures to stimulate the growth of certain industrial sectors or to consolidate and rationalize the operations of certain other sectors;

---

* Except those for which responsability has been specifically entrusted to another economicalli oriented government department.

4. conducting analyses to identify and evaluate the feasibility of specific projects likely to result in:

    a) a new or additional manufacturing activity in Québec,
    b) a new or additional export activity, or
    c) the use of more modern and efficient technology by Québec's manufacturing firms;

    and organizing the necessary measures or technical support for the implementation of such measures to promote the realization of these projects;

5. giving advice and making recommendations to government authorities, various government agencies, heads of business firms and other economic agents concerned with industrial development;

6. introducing foreign investors to the Québec industrial scene and selectively promoting manufacturing investments.

The six areas of activities all entail a thorough knowledge of individual industry sectors. These activities are often directed toward, and always result in, the broadening and enrichment of this knowledge so that it be as concrete and as comprehensive as possible.

The DBE is clearly involved primarily in study, analysis and prospective reflection relating to industrial realities in Québec. This of course, does not mean that the DBE does not take any concrete action, but its initiatives must take into account the specific mandates of other industrial development agents, whether they be in other branches of the ministère de l'Industrie et du Commerce (MIC), in other government departments or in economically oriented government corporations.
